Designer Tile Company

Designer Tile Company is one of the leading tile retailers in Melbourne. We offer the biggest and best range of quality, and affordable, floor and wall tiles, mosaics, specialist tools and tile products for the DIY home renovators, trades, architects and domestic and commercial builders. We have thousands of square metres in stock at our warehouse

Established in 1987, Designer Tile Company is a family owned and run business with over 35 years' experience in the tile industry. Many of our valuable team members have been with our company for over 15 years. We are able to provide expert advice on choosing the perfect tiles and mosaics for your project. We are also able to assist you with colour consulting, tile and timber selections, selecting the best tools and adhesives for the job, as well as reputable local tiler recommendations.

Our central Melbourne showroom is located on Centre Road in Springvale and offers an extensive selection of tiles, mosaics and timber products to help spark inspiration for your next project. We also have a Tile Clearance Centre and Tiler's Warehouse onsite to cater for every project, regardless of the budget.

At Designer Tile Company, we pride ourselves on staying up to date with both local and international tile trends. We are always on the lookout for new products and technologies in tile manufacturing, and application. Furthermore, understanding the importance of constantly providing new products sourced from around the globe for our customers. Our products products are sourced from manufacturers across Italy, Spain and Asia, and no matter the price of the product, quality will never be compromised, and you can be assured that you are receiving the best of the best.

PAD0015 Valley Stone Sand 300x600mm
PAD0002 Valley Stone Coal 600x600mm

Valley Stone

Valley Stone is a collection celebrating the elegance of stone. It is an innovative tile range that can be applied seamlessly indoors and outdoors, thanks to its Sensitech technology. When dry, these tiles have a typical indoor slip rating of P2, but when wet the rating changes to P4 allowing it to applied in outdoor and commercial spaces without the need for a traditional external surface texture.

What you need to know.

Variation rating

Variation ratings, or V ratings, are to provide clarification on the differences in colour, shade and tone that occur of the same tile, in the same batch.

We recommend to always dry lay V3 and V4 rated products prior to laying.

V0 rating	Uniform, monochromatic in colour
V1 rating	Minimal variation between tiles.
V2 rating	A low distinguishable difference in pattern, texture or colour.
V3 rating	A moderate distinguishable difference in pattern, texture or colour.
V4 rating	A clear distinguishable difference between tiles.

Tile faces

The number of tile faces refers to how many different patterns are available/printed per tile. Tile faces range from just one for cheaper/basic tiles and up to 60+ faces on premium ranges. A tile with 20+ faces will allow you to achieve a more natural appearance when laid.

Tile finishes

Our product range features a selection of different tile finishes to suit all spaces and requirements. Finish options include:

Polished	Polished tiles go through the process of passing under a polishing wheel with water and polishing compound to give it the final appearance.
Matt	Perfect for high traffic areas and have better traction that glossy tiles
Lappato/Semi Polished	A softly polished finish that is shinier than matt tiles but not as shiny as polished or gloss tiles.
Honed	The surface of this tile has been ground down slightly to achieve a consistent, smooth texture and flat, matte finish that shows a minimal reflection in light.
Rock Finish/Slate	Rough textured tile typically used for external surfaces with the lowest slip risk.
External	Typically featuring an R11/P5 slip rating, these tiles are specially designed to with-stand weather outdoors whilst maintaining a low slip risk.
Natural	A natural finish tile replicates the look of the desired material by showcasing all of the unique markings, patterns, and textures.
In/out	Specially designed with a matt finish when dry but, due to a unique manufacturing process, when they come into contact with water they turn into anti-slip tiles.
Gloss	A glossy finish is different from a polished finish in that it is created with a glossy glaze and not a polishing wheel.
Satin	A soft, less shiny appearance compared to a polished tile.
Textured	Typically made by pressing materials into a mould that give a textured effect, such as that of natural stone or wood.

Slip rating

The slip ratings of our product range are rated by two systems; the oil-wet ramp test (R rating) and pendulum test (P rating). The R rating test involves applying lubricating oil to tiles laid on an inclined surface and testing at what angle the tiles become unsafe to walk on. The pendulum test involves a friction resistance test between a wet tile and a foot shaped mass with rubber sole to mimic a standard shoe striking a wet tile.

Pendulum Test

P1	Very high slip risk
P2	High slip risk
P3	Moderate slip risk
P4	Low slip risk
P5	Very low slip risk

Oil-Wet Ramp Test

R9	High slip risk
R10	Moderate slip risk
R11	Low slip risk
R12	Very low slip risk

Tile Care & Maintenance

Ceramic and Porcelain Tiles

All tiles, whether ceramic or porcelain, should be maintained on a regular and frequent basis to prevent build-up of soil, grease, residue, soap detergents, sealers, dampness, liquids, etc. to keep the surface clean and reduce the risk of slippery conditions.

Ceramic and porcelain tiles require minimal maintenance and can be cleaned with clear water and/or a pH neutral liquid cleaner (soap-less), followed by a clear water rinse and wipe dry. Sealing or acid cleaning is NOT recommended for any of our ceramic or porcelain products.

Marble Mosaics

To ensure the longevity of your Marble product, a proper and regular maintenance program is important. Natural Stone products are porous by nature and require a different maintenance program than traditional ceramic and porcelain products.

All marble products should be sealed prior to the grouting process to protect them from staining. After grouting is complete, we recommend the application of a good quality sealer to finalise the sealing process. Due to the delicate nature of this product, we recommend the application of a good quality sealer at least once a year to protect from spills and other potential dangers.

Only use cleaners specifically designed for cleaning stone. These cleaners contain no acids and are concentrated neutral pH cleaners that will not affect existing sealers or wax-type coatings.

Disclaimer

A minimum non-refundable deposit of 50% of the Purchase Price shall be paid on all special orders. Slip ratings, tile colours, shades and sizing can vary between productions and we recommend confirmation at the time of specifying and ensuring the products are dry laid before being fixed. Colours depicted in this catalogue may vary to the actual tile. We are not responsible for typographical errors and we make every effort to ensure the accuracy of the information published in our catalogue and website. The information stated in this catalogue is subject to change at any time without notice.
